Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotExceptionAtTheRateExceptionDomainException

A typical email address should have a " . " character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

Input Format

The first line of input contains the email to be validated.

Output Format

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

Sample Test Case

Input: sample@gmail.com
Output: Valid email address

Answer

```
import java.util.Scanner;

class DomainException extends Exception {
    String expDescription;
    DomainException(String expDescription) {
        super(expDescription);
    }
 }

class DotException extends Exception {
    String expDescription;
    DotException(String expDescription) {
        super(expDescription);
    }
 }

class AtTheRateException extends Exception {
    String expDescription;
    AtTheRateException(String expDescription) {
        super(expDescription);
    }
 }

class EmailValidationMain {
   public static void main(String[] args) {
      Scanner myObj = new Scanner(System.in);
      String email = myObj.next();
      boolean checkEndDot  = false;
      checkEndDot = email.endsWith(".");
      int indexOfAt = email.indexOf('@');
      int lastIndexOfAt = email.lastIndexOf('.');
```

```
        int countOfAt = 0;
        for (int i = 0; i < email.length(); i++)
        {
           if(email.charAt(i)=='@')
              countOfAt++;
        }
        String buffering = email.substring(email.indexOf('@')+1, email.length());
        int len = buffering.length();
        int countOfDotAfterAt = 0;
        for (int i=0; i < len; i++) {
           if(buffering.charAt(i)=='.')
              countOfDotAfterAt++; }
        String userName = email.substring(0, email.indexOf('@'));
        String domainName = email.substring(email.indexOf('.')+1, email.length());
        int domainCheck=0;
        if((domainName.equals("in")) || (domainName.equals("com")) ||
    (domainName.equals("net")) || (domainName.equals("biz")))
          domainCheck=1;

        try {
          if((checkEndDot) || (countOfDotAfterAt!=1)) {
            throw new DotException("Invalid Dot usage");
          }

          if(countOfAt!=1) {
            throw new AtTheRateException("Invalid @ usage");
          }

          if(domainCheck!=1) {
            throw new DomainException("Invalid Domain");
          }

        }catch(DotException e) {
          System.out.println(e);
        }catch(AtTheRateException e) {
          System.out.println(e);
        }catch(DomainException e) {
          System.out.println(e);
        }

        if ((countOfAt==1) && (userName.endsWith(".")==false)  &&
    (domainCheck==1) && (countOfDotAfterAt ==1) &&((indexOfAt+3) <=
```

```
(lastIndexOfAt) && !checkEndDot)) {
          System.out.println("Valid email address");
        }

         else {
           System.out.println("Invalid email address");
         }
        myObj.close();
    }
}
```

Status : Correct **Marks : 10/10**
